

## Exercice à la maison

---

EX 1)

```
Import java.util.Scanner;
```

```
Public class Main {
```

```
    Public static void main(String[] args) {
```

```
        Scanner input = new Scanner(System.in);
```

```
        System.out.print("Entrez le premier nombre: ");
```

```
        Int nombre1 = input.nextInt();
```

```
        System.out.print("Entrez le deuxième nombre: ");
```

```
        Int nombre2 = input.nextInt();
```

```
        System.out.println("Somme: " + (nombre1 + nombre2));
```

```
        System.out.println("Différence: " + (nombre1 - nombre2));
```

```
        System.out.println("Produit: " + (nombre1 * nombre2));
```

```
        If (nombre2 != 0) {
```

```
            System.out.println("Quotient: " + (nombre1 / nombre2));
```

```
        } else {
```

```
            System.out.println("Erreur: Division par zéro");
```

```
        }
```

```
    }
```

```
}
```

Ex2)

```
import java.util.Scanner;

public class Main {

    public static void main(String[] args) {

        Scanner sc = new Scanner(System.in);

        System.out.print("Entrez le premier nombre: ");

        int n1 = sc.nextInt();

        System.out.print("Entrez le deuxième nombre: ");

        int n2 = sc.nextInt();

        int somme = n1 + n2;

        int difference = n1 - n2;

        int produit = n1 * n2

        System.out.println("La somme est: " + somme);

        System.out.println("La différence est: " + difference);

        System.out.println("Le produit est: " + produit);

        if (n2 != 0) {

            double quotient = (double) n1 / n2;

            System.out.println("Le quotient est: " + quotient);

        } else {
```

```

        System.out.println("Erreur: Division par zéro");
    }
}
• }

```

Ex3)

```

Import java.util.Scanner;

```

```

Public class Main {
    Public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        System.out.print("Entrez une note entre 0 et 20: ");
        Int n = sc.nextInt();

        If (n >= 10) {
            System.out.println("Validé");
        } else {
            System.out.println("Non validé");
        }
    }
}

```

Ex4)

```

Import java.util.Scanner;

```

```

Public class Main {
    Public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        System.out.print("Entrez le premier nombre: ");
        Int n1 = sc.nextInt();
        System.out.print("Entrez le deuxième nombre: ");
        Int n2 = sc.nextInt();

        If (n1 == 0 || n2 == 0) {
            System.out.println("Le produit est nul");
        } else {
            If (n1 * n2 > 0) {
                System.out.println("Le produit est positif");
            } else {
                System.out.println("Le produit est négatif");
            }
        }
    }
}

```

Ex5)

```

Import java.util.Scanner;

```

```

Public class Main {
    Public static void main(String[] args) {

```

```
Scanner sc = new Scanner(System.in);
```

```
System.out.print("Entrez un entier: ");
```

```
Int n = sc.nextInt();
```

```
Int vA;
```

```
If (n < 0) {
```

```
    vA = -n;
```

```
} else {
```

```
    vA = n;
```

```
}
```

```
System.out.println("La valeur absolue est: " + vA);
```

```
}
```

```
}
```

Ex6)

```
Import java.util.Scanner;
```

```
Public class Main {
```

```
    Public static void main(String[] args) {
```

```
        Scanner sc = new Scanner(System.in);
```

```
        System.out.print("Entrez un entier: ");
```

```
        Int n = sc.nextInt();
```

```
        If (n % 2 == 0) {
```

```

        System.out.println("L'entier est pair");
    } else {
        System.out.println("L'entier est impair");
    }
}
}

```

EX7)

```

Import java.util.Scanner;

```

```

Public class Main {
    Public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        System.out.print("Entrez un entier: ");
        Int n = sc.nextInt();
        Int cU = n % 10;

        If (cU == 0) {
            System.out.println("Erreur: Division par zéro");
        } else {
            If (n % cU == 0) {
                System.out.println(n + " est divisible par " + cU);
            } else {
                System.out.println(n + " n'est pas divisible par " + cU);
            }
        }
    }
}

```

```
}  
}
```

Ex8)

```
Import java.util.Scanner;
```

```
Public class Main {
```

```
    Public static void main(String[] args) {
```

```
        Scanner sc = new Scanner(System.in);
```

```
        System.out.print("Entrez la première note: ");
```

```
        Double note1 = sc.nextDouble();
```

```
        System.out.print("Entrez le coefficient de la première note: ");
```

```
        Int coeff1 = sc.nextInt();
```

```
        System.out.print("Entrez la deuxième note: ");
```

```
        Double note2 = sc.nextDouble();
```

```
        System.out.print("Entrez le coefficient de la deuxième note: ");
```

```
        Int coeff2 = sc.nextInt();
```

```
        System.out.print("Entrez la troisième note: ");
```

```
        Double note3 = sc.nextDouble();
```

```
        System.out.print("Entrez le coefficient de la troisième note: ");
```

```
        Int coeff3 = sc.nextInt();
```

```
        Double moyenne = (note1 * coeff1 + note2 * coeff2 + note3 * coeff3) /  
        (coeff1 + coeff2 + coeff3);
```

```
System.out.println("La moyenne est: " + moyenne);
```

```
    If (moyenne >= 10) {  
        System.out.println("Félicitations, vous êtes admis!");  
    } else {  
        System.out.println("Bonne chance pour la prochaine session!");  
    }  
}  
}
```

EX9)

```
Import java.util.Scanner;
```

```
Public class Main {  
    Public static void main(String[] args) {  
        Scanner sc = new Scanner(System.in);  
  
        System.out.print("Entrez la valeur de a: ");  
        Double a = sc.nextDouble();  
        System.out.print("Entrez la valeur de b: ");  
        Double b = sc.nextDouble();  
  
        If (a == 0) {  
            If (b == 0) {  
                System.out.println("Il y a une infinité de solutions.");  
            }  
        }  
    }  
}
```

```

    } else {
        System.out.println("Pas de solution.");
    }
} else {
    Double x = -b / a;
    System.out.println("La solution de l'équation est: " + x);
}
}
}

```

Ex10)

```

Import java.util.Scanner;

```

```

Public class Main {
    Public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        System.out.print("Entrez un caractère: ");
        Char c = sc.next().charAt(0);

        If (c >= 'A' && c <= 'Z') {
            System.out.println("C'est une lettre majuscule.");
        } else if (c >= 'a' && c <= 'z') {
            System.out.println("C'est une lettre minuscule.");
        } else {
            System.out.println("Ce n'est pas une lettre.");
        }
    }
}

```

```
    }  
    }  
}
```

Ex11)

```
Import java.util.Scanner;
```

```
Public class Main {  
    Public static void main(String[] args) {  
        Scanner sc = new Scanner(System.in);  
  
        System.out.print("Entrez votre âge: ");  
        Int age = sc.nextInt();  
  
        If (age >= 6 && age <= 7) {  
            System.out.println("Catégorie: Gamin");  
        } else if (age >= 8 && age <= 9) {  
            System.out.println("Catégorie: Pupille");  
        } else if (age >= 10 && age <= 11) {  
            System.out.println("Catégorie: Jeune");  
        } else if (age >= 12) {  
            System.out.println("Catégorie: Cadet");  
        } else {  
            System.out.println("Âge non valide");  
        }  
    }  
}
```

Ex12)

```
Import java.util.Scanner;
```

```
Public class Main {
```

```
    Public static void main(String[] args) {
```

```
        Scanner sc = new Scanner(System.in);
```

```
        System.out.print("Entrez un numéro de mois (1 à 12): ");
```

```
        Int mois = sc.nextInt();
```

```

                Break;
```

```
            Case 2:
```

```
                System.out.println("Février");
```

```
                Break;
```

```
            Case 3:
```

```
                System.out.println("Mars");
```

```
                Break;
```

```
            Case 4:
```

```
                System.out.println("Avril");
```

```
                Break;
```

```
            Case 5:
```

```
                System.out.println("Mai");
```

```
                Break;
```

Case 6:

```
System.out.println("Juin");
```

```
Break;
```

Case 7:

```
System.out.println("Juillet");
```

```
Break;
```

Case 8:

```
System.out.println("Août");
```

```
Break;
```

Case 9:

```
System.out.println("Septembre");
```

```
Break;
```

Case 10:

```
System.out.println("Octobre");
```

```
Break;
```

Case 11:

```
System.out.println("Novembre");
```

```
Break;
```

Case 12:

```
System.out.println("Décembre");
```

```
Break;
```

Default:

```
System.out.println("Numéro de mois non valide");
```

```
Break;
```

```
}
```

```
}
```

```
}
```

Ex13)

```
Import java.util.Scanner;
```

```
Public class Main {
```

```
